

17-0-4 100% Regain®, Nutrilife, 20% Topcut Biosolid

- Analysis designed with the lawn care specialist in mind.
- Economical source of turf fertilizer with 100% Regain® for a healthier more colorful turf. Reduces the turf stress and minimizes the nutrient run off and leaching. Regain® is actively protecting the nitrogen.
- Added Nutrilife® (Biochemical catalyst) that makes fertility programs more efficient, getting more nutrients into the plant and improving plant performance. It improves the conversion of organic and inorganic fertilizers into plant-available forms, therefore, requiring less nitrogen to achieve same great turf color. Larger root mass equals healthier plants.
- Contains Topcut® biosolids as the filler to replenish organic matter and improve soil structure. Recycles by-products to conserve landfill costs. Includes nitrogen, phosphorous, iron, calcium and additional micro-nutrients necessary for turf growth. Nutrients release slowly over a period of time, feeding the soil continuously.

Endure

A 50lb bag treats 12,500 square feet on turfgrass- 4lb per 1000sq ft.

*Endure uses a uniform particle size for improved spread pattern and coverage. Uniform coverage provides even green color and more effective herbicide control. Spread charts are on each bag. Turfgrass needs to be fed every six to eight weeks during the growing season. Regain® keeps nitrogen where turf can use it and makes the nitrogen more available when turf needs it the most.

* All phosphates have been removed from the Endure maintenance products keeping our environmental concern in mind. Adding biosolids enriches the soil with organic matter. This improves overall soil health, reduces soil erosion and improves water holding capacity that enhances root development.
