

Summer Fertilizer With Above & Below Ground Insect Control 18-0-3

Contains 100% Regain®, Mallet (0.2% Imidacloprid) & Lambda-Cyhalothrin

- Powerful combination of Imidacloprid & Lambda-Cyhalothrin, providing insect control for grubs and surface feeders
- Apply three weeks prior to grub season in your area, irrigate for season-long grub control
- Regain® provides advanced continuous protection and stabilized nitrogen for superior green up and low burn potential
- Great color with proven herbicide performance
- Water thoroughly after application to ensure good placement of Mallet to achieve season long grub control

A 50lb. bag treats 12,500 square feet on turfgrass.

*Endure uses a uniform particle size for improved spread pattern and coverage. Uniform coverage provides even green color and more effective herbicide control. Turfgrass needs fed every six to eight weeks during the growing season.

*All phosphates have been removed from the Endure maintenance products keeping our environmental concerns in mind. Newly seeded turf should be fertilized with Endure 10-20-8 Starter Plus Earth-Friendly Organics at the time of planting. 10-20-8 Starter Plus can be used anytime a soil test result recommends additional phosphate to improve soil conditions.
