

## 14-0-3 Fertilizer with 100% Regain® Coated Nitrogen Contains .37% Prodiamine® Crabgrass Control

- Prodiamine provides pre-emergent control of crabgrasses and other annual grasses
- Regain® keeps more nitrogen where the turf can use it
- Reduces stress from nitrogen leaching and volatile denitrification
- Economical spring treatment to control crabgrass and green up turf while not promoting excess turf growth

A 50lb. bag treats 12,500 square feet on turfgrass.

\*Do not plant grass seed for six to eight weeks following application.

\*Endure uses a uniform particle size for improved spread pattern and coverage. Uniform coverage provides even green color and more effective herbicide control. Turfgrass needs fed every six to eight weeks during the growing season.

\*All phosphates have been removed from the Endure maintenance products keeping our environmental concerns in mind. Newly seeded turf should be fertilized with Endure 10-20-8 Starter Fertilizer at the time of planting. 10-20-8 Starter Fertilizer can be used anytime a soil test result recommends additional phosphate to improve soil conditions.
