

Fungicide Compare

Hi-Yield

ferti-lome Info Sheet

ferti-lome

FL 2 N 1 Systemic

This is a systemic insecticide and systemic fungicide in one, easy to use application. Use on shrubs, flowers and ornamentals. An application works up to 6 weeks.

FL Liquid Systemic Fungicide

This can be used for fungus in Turf and it can be very effective, always make at least two applications. You can also use Liquid Systemic on flowers, trees, shrubs, anything not-edible. This fungicide has a side effect that acts like a growth regulator, so after you make applications, you will see recovery growth. Kind of Cool! Again, use two applications, two to three weeks apart.

FL F- Stop Granule

Fungus in Turf is really simple.....Use F-Stop Granule! F-Stop works best as a preventative, apply before the fungus starts and you won't even get it. If they come in with a fungus already started, it is also a great control, actually offering some recovery. On most fungus in turf it is a single application. If it is well established, you may need to make two applications 2 to 3 weeks apart. All other fungicide granules are a minimum of two applications 2 to 3 weeks apart. Not F-Stop!

FL F-Stop Liquid

This is NOT as effective on Turf as the granule and you MUST make multiple applications at 2 week intervals. It is very effective on all fruit and berry plants, recommended by many Universities. Also use on ornamentals, flowers and roses.

HY Captan 50W Fungicide

This is an old chemistry fungicide. It is very effective on fruit and berry plants, always make at least two application at the intervals listed on the label, often more applications will be required.

FL Broad Spectrum Fungicide and HY Veg, Flower, Fruit & Orn Fungicide

Broad Spectrum Fungicide is one of our edibles fungicide. Use on all vegetables for almost all fungus that occurs there. As with all liquid fungicides, you must use at least two applications at 7 to 10 day intervals. see the label for the frequency of application and days to harvest. This also has a very good evergreen and ornamental label, the downfall is repeat applications required.

NG Copper Soap

This is a fungicide and bactericide. It is very effective on almost all vegetable fungus. This is a great choice for early blight and leaf spot on Tomatoes. Can also be used on ornamentals and flowers. Don't forget using on Bacteria!

FL Triple Action

Triple Action is an Insecticide, Miticide and Fungicide. It can be used on almost all plants including vegetables. This is a good choice when you don't know what the problem is. Always make two applications 10 to 14 days apart, repeat as needed. Hey its a Natural product and is OMR! Certified!

NG Neem

This is straight neem oil for those who don't want Pyganic that is in FL Triple Action. Use this the same as above and repeat.

HY Wettable Dusting Sulfur

This is another insecticide and fungicide. It also can be used as a dust or mixed and sprayed. re-apply after rain or watering and at intervals listed on the bag.
