

Sugar Graze ST

FEATURES

- Extended maturity of 10-14 days over conventional sorghum sudangrass hybrids (dependent on planting date)
- Sterile seed heads allow for a buildup of carbohydrates in the stem and leaves for added palatability (To maintain sterility, Sugar Graze ST, must not be planted in close proximity to other forage sorghums, sorghums or regular sorghum sudan hybrids)
- For grazing, haying, green chop and haylage
- Fast recovery after grazing or cutting
- Sterility allows flexibility as a “green manure” or cover-crop
- Excellent foliar disease resistance
- Excellent forage producer with a high leaf to stem ratio
- High yield potential with flexible harvest dates ensuring quality throughout the growing season
- Drought tolerant

SORGHUM-SUDAN FEATURES

Plant type: Annual Grass
 Planting dates: May-July
 Soil pH: 6.0-7.0
 Soil adaption: Wide, 60° or warmer
 Planting depth: 3/4”-1 1/4”
 Approximate seeds/lb: 20,000-22,000
 Seeding rate: 20-50 lbs/A
 Days to germination: 7
 Main usage: Grazing, green chop, hay, haylage
 Length of stand: Annual
 Pounds per bushel: 56
Precautions: Prussic Acid, Nitrate Poisoning

Agronomic Traits

Seed Color	Red
Seed/lb.	20-22,000 seed/lb.
Seedling Vigor	Excellent
Height (at heading)	10-12 feet
Recovery After Cutting	Good
Downy Mildew Resistance	Excellent
Leaf Disease Resistance	Excellent
Photoperiod Sensitivity	Non Sensitive
Drought Tolerance	Excellent

CROP USE INFORMATION

Life cycle	Annual
Ease of establishment	Good
Drought stress	Good
Minimum pH	6.0
Hay	Excellent
Silage	Excellent
Rotational grazing	Excellent
Palatability	Excellent
