

Hi-Yield®

ferti-lome Info Sheet

Crabgrass Preventer compare

I set this sheet up from shortest preventing time to longest.

HY Herbicide Granules Contains: Trifluralin (Same as Preen®)

Prevents for 4 to 10 weeks depending on how deep it is worked into the soil.

Must come in contact with the soil to work. Can be used around VEGETABLES.

HY Crabgrass Control Contains: Treflan and Balan no fertilizer

Prevents for 6 to 8 weeks, the same amount of time as Scotts Halts®.

Most Universities recommend a second application 6 to 8 weeks later, for both.

Prevents mostly annual grasses and only some broadleaf weeds.

Crabgrass Preventer plus Lawn Food Contains: Dimension

Prevents for 3 to 4 months with a slow release fertilizer, feeds up to 8 weeks.

Also has post emergent properties on very young weeds and grasses.

Turf & Ornamental Contains: Dimension no fertilizer

Pre and Post emergent properties, prevents for 3 to 4 months.

Can be used in a landscape bed, around flowers, trees, shrubs and the yard.

Weed-Out Pro Turf Contains: Dimension and Trimec

Prevents for 3 to 4 months with a slow release fertilizer, feeds up to 8 weeks.

Prevents weeds and kills broadleaf weeds in one application. Step 1 and 2 together.

For All Seasons II Contains: Prodiamine aka Barricade

Prevents summer weeds and grasses for 4 to 8 months. Low fertilizer amount.

Apply as early as possible, even the fall. Great for grassy sandbur.

Broadleaf Weeds

A-Vert plus Lawn Food Contains: Gallery and Team

Prevents annual grasses and broadleaf weeds for up to 3 months.

Apply twice a year; spring for crabgrass and weeds, early fall for dandelions and more.

Broadleaf Weed Control Contains: Gallery no fertilizer

Prevents broadleaf weeds for up to 8 months. Apply in spring or fall.

May be used on turf or ornamental beds.

On all preventers except *Weed-Out Pro Turf*, apply and water in.

Weed-Out Pro Turf, apply when wet and water in after 24 hours.
