

## 12-0-3 All Mineral Fertilizer

Contains .703% Trimec® herbicide.

- Trimec® absorbs through the leaves and translocates to the roots of actively growing broadleaf weeds
- Apply to moist leaves to encourage Trimec® absorption for quicker kill response to the broadleaf weeds
- Fall as well as spring applications to actively growing perennial weeds gives best results
- Great color with proven herbicide performance
- Do not reseed for six to eight weeks after application

A 50lb. bag treats 12,500 square feet on turfgrass.

\*Endure uses a uniform particle size for improved spread pattern and coverage. Uniform coverage provides even green color and more effective herbicide control. Spread charts are on each bag. Turfgrass needs fed every six to eight weeks during the growing season.

\*All phosphates have been removed from the Endure maintenance products keeping our environmental concerns in mind. Newly seeded turf should be fertilized with Endure 10-20-8 Starter Fertilizer at the time of planting. 10-20-8 Starter Fertilizer can be used anytime a soil test result recommends additional phosphate to improve soil conditions.
