

30-0-5 Fertilizer with 30% XCU Contains 2% Iron

- Analysis designed with the lawn care specialist in mind
- Economical source of turf fertilizer with sulfur coated urea, that delivers up to 10 weeks of steady nutrient delivery
- Added 2% Iron will assist turf green up during hot dry summer months
- Works well as a year-round turf food
- Uniform particle size results in a uniform spread pattern for even green up of turf

A 50lb. bag treats 12,500 square feet on turfgrass.

*Endure uses a uniform particle size for improved spread pattern and coverage. Uniform coverage provides even green color and more effective herbicide control. Spread charts are on each bag. Turfgrass needs fed every six to eight weeks during the growing season.

*All phosphates have been removed from the Endure maintenance products keeping our environmental concerns in mind. Newly seeded turf should be fertilized with Endure 10-20-8 Starter Fertilizer at the time of planting. 10-20-8 Starter Fertilizer can be used anytime a soil test result recommends additional phosphate to improve soil conditions.
